

LISTING OF THE CLAIMS

1. (Original) A heat-resistant plastic tube comprising:

a polyester-based elastomer which exhibits a change amount in angle of $\pm 10^\circ$ or less in a shape retainability performance test, a change rate in inner diameter of $\pm 2\%$ or less in a dimensional stability performance test, and a change rate in yield strength of $\pm 30\%$ or less in a flexibility retainability performance test.

2. (Currently Amended) The heat-resistant plastic tube according to Claim 1, wherein the tube comprises a single layer ~~comprising a~~ of the polyester-based elastomer.

3. (Currently Amended) The heat-resistant plastic tube according to Claim 1, wherein the tube comprises:

an inner layer comprising a polyester-based ~~elastomer~~ elastomer and an outer layer formed on an outside of the inner layer and comprising a crystalline polyester-based resin.

4. (Currently Amended) The heat-resistant plastic tube according to Claim 1, wherein the tube comprises an inner layer comprising a crystalline polyester-based resin and an outer layer formed on an outside of the inner layer and comprising a polyester-based elastomer.

5. (Currently Amended) The heat-resistant plastic tube according to Claim 1, wherein the tube comprises at least an inner layer comprising a polyester-based elastomer, an intermediate layer formed on an outside of the inner layer and comprising a crystalline polyester-based resin, and an outer layer formed on an outside of the intermediate layer and comprising a polyester-based elastomer.

6. (Currently Amended) The heat-resistant plastic tube according to Claim 1, wherein the tube is a fuel feed tube usable within an engine compartment of a motor vehicle.

7. (Currently Amended) The heat-resistant plastic tube according to ~~Claim2~~ Claim 2, wherein the tube is a fuel feed tube usable within an engine compartment of a motor vehicle.

8. (Currently Amended) The heat-resistant plastic tube according to ~~Claim3~~ Claim 3, wherein the tube is a fuel feed tube usable within an engine compartment of a motor vehicle.

9. (Currently Amended) The heat-resistant plastic tube according to ~~Claim4~~ Claim 4, wherein the tube is a fuel feed tube usable within an engine compartment of a motor vehicle.

10. (Currently Amended) The heat-resistant plastic tube according to ~~Claim5~~ Claim 5, wherein the tube is a fuel feed tube usable within an engine compartment of a motor vehicle.

11. (Currently Amended) The heat-resistant plastic tube according to ~~Claim1~~ Claim 1, wherein the tube further comprises a bellows portion extending at least part of its length.

12. (Currently Amended) The heat-resistant plastic tube according to ~~Claim2~~ Claim 2, wherein the tube further comprises a bellows portion extending at least part of its length.

13. (Currently Amended) The heat-resistant plastic tube according to ~~Claim3~~ Claim 3, wherein the tube further comprises a bellows portion extending at least part of its length.

14. (Currently Amended) The heat-resistant plastic tube according to ~~Claim4~~ Claim 4, wherein the tube further comprises a bellows portion extending at least part of its length.

15. (Currently Amended) The heat-resistant plastic tube according to ~~Claim5~~ Claim 5, wherein the tube further comprises a bellows portion extending at least part of its length.

16. (Currently Amended) The heat-resistant plastic tube according to ~~Claim3~~ Claim 3, wherein an innermost of the layers has a surface resistivity in a range of from 102 to 109 W/sq.

17. (Currently Amended) The heat-resistant plastic tube according to ~~Claim 4~~ Claim 4, wherein an innermost of the layers has a surface resistivity in a range of from 102 to 109 W/sq.

18. (Currently Amended) The heat-resistant plastic tube according to ~~Claim 5~~ Claim 5, wherein an innermost of the layers has a surface resistivity in a range of from 102 to 109 W/sq.

19. (Original) The heat-resistant plastic tube according to Claim 13, wherein an innermost of the layers has a surface resistivity in a range of from 102 to 109 W/sq.

20. (Original) The heat-resistant plastic tube according to Claim 14, wherein an innermost of the layers has a surface resistivity in a range of from 102 to 109 W/sq.

21. (Original) The heat-resistant plastic tube according to Claim 15, wherein an innermost of the layers has a surface resistivity in a range of from 102 to 109 W/sq.

22. (Withdrawn) A manufacturing method of the heat resistant plastic tube according to Claim 1, the tube having a bent portion, comprising steps of setting a body of a heat resistant plastic tube in a thermal bending mold, heating the tube body in the mold at 190°C or higher and cooling the tube body in a state being set in the mold.

23. (Withdrawn) A manufacturing method of the heat-resistant plastic tube according to Claim 2, the tube having a bent portion, comprising steps of setting a body of a heat resistant plastic tube in a thermal bending mold, heating the tube body in the mold at 190°C or higher and cooling the tube body in a state being set in the mold.

24. (Withdrawn) A manufacturing method of the heat resistant plastic tube according to Claim 3, the tube having a bent portion, comprising steps of setting a body of a heat resistant plastic

tube in a thermal bending mold, heating the tube body in the mold at 190°C or higher and cooling the tube body in a state being set in the mold.

25. (Withdrawn) A manufacturing method of the heat resistant plastic tube according to Claim 4, the tube having a bent portion, comprising steps of setting a body of a heat resistant plastic tube in a thermal bending mold, heating the tube body in the mold at 190°C or higher and cooling the tube body in a state being set in the mold.

26. (Withdrawn) A manufacturing method of the heat resistant plastic tube according to Claim 5, the tube having a bent portion, comprising steps of setting a body of a heat resistant plastic tube in a thermal bending mold, heating the tube body in the mold at 190°C or higher and cooling the tube body in a state being set in the mold.
